	2000	5.9%	9.9%	14.0%	-22.3%	-9.2%

General Information

The Investable Benchmarks (IBs) are comprised of leading funds from Vanguard, iShares, ProShares, Direxion, and Grayscale. The performance estimates for the IBs relate to a range of hypothetical core models, strategies that David Kreinces first backtested in 2005. These portfolios do not take into account an individual's investment objectives and financial circumstances. Consult your investment adviser before investing.

Mr. Kreinces was solely responsible for the development of all four IBs and he had full discretionary authority over the selection of investments. **The Bitcoin Trust (GBTC) allocations were added at year-end 2020 and the equity and bond balance was 50/50 prior to this change. The Ethereum Trust (ETHE) allocations were added at year-end 2021.**

Income & Growth (IG): 49% S&P (VOO), 49% Long-Term Treasuries (TLT), 1% Bitcoin Trust, and 1% Ethereum Trust.

Income & Growth 2x (IG 2x): 48% S&P 500 2x (SSO), 48% Long-Term Treasuries 2x (UBT), 2% GBTC, and 2% ETHE.

Income & Growth 3x (IG 3x): 48% S&P 500 3x (UPRO), 48% Long-Term Treasuries 3x (TMF), 2% GBTC, and 2% ETHE.

Income & Tech 3x (IT 3x): 47% Nasdaq 100 3x (TQQQ), 47% Long-Term Treasuries 3x (TMF), 3% GBTC, and 3% ETHE.

Performance Estimates

The performance estimates reflect performance that would have been achieved by a hypothetical account with annual rebalancing. The performance estimates are backtested and have not been audited. Conservative estimates were used for underlying ETF performance prior to their inception. The performance estimates do not reflect trading fees associated with annual rebalancing, and assume reinvestment of dividends.

The performance estimates for all of the IBs are net of a 0.25% annual advisory fee. Each ETF PM advisory account is solely responsible for all advisory fees, commissions and other transaction charges, as well as any charge relating to the custody of securities in such account.

Backtesting involves simulation of a quantitative investment model by applying all rules, thresholds and strategies to a hypothetical portfolio during a specific time period. The investable benchmark performance estimates do not reflect the returns of actual client accounts. Backtested performance does not represent actual trading and does not reflect the impact that material market factors might have had on ETF PM's decision-making.

Historical performance estimates are not indicative of future performance. The investment return and principal value of an ETF PM account will fluctuate and may be worth more or less than the original cost when liquidated. The investment environment and market conditions may be markedly different in the future and investment returns will fluctuate in value.

The IBs were implemented, and will continue to be implemented, with a view towards strategic, low-cost diversification across multiple asset classes. The performance estimates presented are for comparison purposes only. All of the information in this report was taken from sources which we believe to be reliable, but we cannot guarantee perfect accuracy.

Leveraged ETFs

Leveraged ETFs do not deliver their exact multiple of the underlying index. On a regular basis, leveraged ETF returns may deviate materially from the underlying index multiple they target. Investors should not use leveraged ETFs without careful consideration, an appropriate asset allocation, and a disciplined risk control framework.

S&P 500

SPY is an ETF for the S&P 500 Index. The S&P 500 Index is an unmanaged index of common stocks that represents the U.S. stock market. The index is mainly comprised of large cap companies and reflects roughly 80% of the total domestic stock market value. SSO is an ETF that targets the S&P 500 2x, and UPRO has a 3x target.

Treasury Bonds

TLT is an ETF for 20+ Year Treasury Bonds. UBT targets this asset class 2x, and TMF has a 3x target.

Bitcoin Trust

GBTC is a publicly traded Bitcoin investment trust, which is a holding company with over \$10 billion in assets under management.
